

LIFE FRONT

(Flammable Refrigerant Options for Natural Technologies) is an EU project aiming to remove barriers posed by standards for flammable refrigerants in refrigeration, heating and cooling applications.

- Increase the availability of climate-friendly alternatives to fluorinated gases
- Improve system design to address flammability risk
- Support the EU and international standardisation process for flammable refrigerants
- Engage in technology capacity-building for EU equipment manufacturers

life front

GET INVOLVED

LIFE FRONT has created a Standard Action Group (SAG) FRONT - a voluntary group of stakeholders interested to contribute to improving safety standards for flammable natural refrigerants.

SAG members are invited to contribute to:

- Leak size and leak simulation database
- Quantitative risk assessment for improved safety of hydrocarbons in HVAC&R applications
- Recommended guidelines for draft standards
- European and international standardisation works.

BE IN THE "FRONT" LINE AND JOIN THE EFFORT:
